

ALEXEY LEBEDEV

Belarus | <https://t.me/strawdivane> | aliaksey.lebiadzeu@gmail.com

Ruby on Rails developer with 8+ years of experience building business-critical applications in e-commerce, payments and fintech reporting. Currently at x7.dev as team lead, supporting the CTO while staying hands-on.

Core strengths: Rails from 3.2 to 8, PostgreSQL, Sidekiq, payment and third-party integrations, API design and testing, AI-assisted development and LLM integration into production applications.

WORK EXPERIENCE

Senior Ruby on Rails Developer / Lead at x7.dev

March 2025 - now

Projects:

SERVICEPLATFORM.IO

Description: Multi-tenant SaaS for merchant payment operations: it collects data from POS systems, payment terminals, acquirers and banks, reconciles it, and gives retail chains dashboards, reconciliation workflows, DATEV accounting exports and an AI assistant. Data arrives through a set of collector microservices: 3POS polls the POS vendor's API, Nexi signs into the acquirer's portal and downloads transaction and settlement files, Softpay receives payment webhooks, SFTP Ingest picks up POS files from client servers, EmailPipe extracts reports from email.

Tasks: Core developer of the product from the first screens to production. Responsible for multi-tenancy and access control, subscription plans, master data, the report pipeline and the reconciliation engine, and DATEV accounting exports. Designed and built the AI layer: an in-app MCP server with OAuth 2.0 and a catalogue of domain tools, an assistant on Anthropic Managed Agents, and scheduled agent tasks and reports. Designed, built and maintain all the collectors — scheduling and retries, transformation into the platform's format, delivery

through the Integration API, and monitoring of failed transmissions. Own architecture decisions, performance and test coverage.

Technologies: Ruby 3.3–3.4, Ruby on Rails 7.2/8, PostgreSQL, Redis, Sidekiq, Hotwire, Tailwind, Devise, Doorkeeper (OAuth 2.0), Pundit, Stripe, MCP, Anthropic API, OpenAI API, Playwright, Docker, Kamal, Minitest.

VERSACOMMERCE

Description: German e-commerce SaaS — a Shopify-like platform with hosted shops, a Liquid theme engine, checkout, payments, POS and German fiscal compliance; a codebase started in 2011 and still on its original stack.

Tasks: Responsible for the payments area — Stripe, PayPal, Apple Pay and SEPA: resolved production issues with webhooks and order status, built a webhook audit log with duplicate-payment protection and a weekly reconciliation report with alerting. Led the migration of the POS subsystem to multiple cash registers per shop, including German fiscal compliance (Fiskaly TSE, DSFinV-K). Migrated image storage from AWS S3 to Hetzner. Team lead duties supporting the CTO: coordinating the team, estimating and breaking down tasks, running meetings, code review and mentoring.

Technologies: Ruby 2.6, Ruby on Rails 3.2, Sinatra, MySQL, Redis, Memcached, Sidekiq, Liquid, Stripe API, Heroku, Kamal, Hetzner S3, AppSignal, RSpec.

AI-ASSISTED DEVELOPMENT

Description: All development is AI-first — Claude Code and Cursor across every repository. Set up the team's AI workflow: context files and conventions per project, custom commands and sub-agents, a shared library of reusable agents and MCP configs, and automated PR review in CI.

Senior Ruby on Rails Developer at Pittersgarden

October 2022 - March 2025

Projects:

CALL-TRACKING

Description: Dynamic and static call tracking with detailed reports of calls from all advertising sources, integrated with Bitrix24, amoCRM, Telegram, Google Analytics and Yandex Metrika.

Tasks: Implemented the API for the new version of the application, reworked error handling in third-party integrations, and modernised the project's toolchain — analytics storage, validation, serialization, API docs and CI. Tests, code review and mentoring junior developers.

Technologies: Ruby 2.7/3.0, Ruby on Rails 6/7, Devise, Sidekiq, MySQL, PostgreSQL, TimescaleDB, Clickhouse, Redis, JQuery, Bootstrap 4, Newrelic, Rspec, GitHub Actions.

SIP-SIM

Description: SIM-card-based virtual PBX: call queuing and recording, call routing and IVR, ring groups, real-time analytics and CRM integrations.

Tasks: Took part in launching the product in an EU country — new CRM and telephony-provider integrations and a new client cabinet UI. Built client reports and invoicing logic for account managers, wrote tests, reviewed code and led a small sub-team.

Technologies: Ruby 2.7, Ruby on Rails 6, Devise, Sidekiq, PostgreSQL, Redis, JQuery, Bootstrap 4, Google API, Telegram API, Newrelic, Rspec, Docker.

Ruby on Rails Developer at Centegra Plus

December 2020 - October 2022

Projects:

CENTEGRA-PLUS

Description: Rails app for managing restaurants and cafes: back-office, inventory control, revenue management, real-time dashboards and analytics across a network of restaurants or a single site.

Tasks: Took part in the migration to Rails 6 and the move to Webpacker, rewrote legacy Ruby and JS code, built new services and VueJS components, and rewrote part of the reports in VueJS instead of SSR views. Code review and mentoring.

Technologies: Ruby 2.7, Ruby on Rails 6, Pundit, Sidekiq, MS SQL Server, Redis, Heroku, VueJS, JQuery, Bootstrap 4, AWS.

Ruby Developer at Profitero

January 2018 - December 2020

- Built 50+ parser modules collecting product data from retail sites and mobile apps — emulating user flows and API requests, solving captchas and reverse-engineering Tmall, Amazon, Walmart and others.
- Wrote a Ruby client for the Chrome DevTools protocol (a Puppeteer analogue) and helped maintain the browser farm; built internal Rails tools — content monitoring with automatic JIRA tickets and an estimation tool.
- Mentored newcomers and improved the corporate educational program.

Technologies: Ruby 2.4-2.6, Ruby on Rails 5, Sequel, MySQL, Clickhouse, Redis, Nokogiri, Curb, headless Chrome, Jenkins, JIRA.

EDUCATION

Belarusian State University of Informatics and Radioelectronics, Bachelor

September 2015 - June 2019

Computer Engineering
